

HOW-TO INTEGRATE SAGE, MEEDIO, & GIRDER INTO A SIMPLE-TO-USE MENU SYSTEM

- Here's one method of integrating SageTV, Meedio, & Girder. This uses SageTV's hardware-accelerated menu for a home page and launches Meedio (which handles all my mp3's) as the "Music" option from the Sage menu. My Sage menu system has been modified using nielm's customizable menu .STV module (available at the SageTV website), so it's now a simple-to-use menu system with only two menu screens: the Main Menu, and an Options Menu.. It's got a high WAF. (Wife Acceptance Factor) and it's straightforward to use.
- Here's the 'home' menu for the meedia PC. (Notice that it is currently Sage with a Meedio default theme background.)

- There's only 1 more Sage menu available to the user, and that's the Options menu seen here:

- The only other screen users can really see is the "Music" screen, chosen from the Main Menu of Sage. This launches the Meedio exe, and Girder switches to a Meedio-only group (details later). Meedio & Sage are configured to have a similar appearance:
